

RFQ Checklist

What to send for a fast, accurate quotation — feasibility, tooling and price usually within 24 hours

☐ **The drawing**

PDF, DWG or STEP of the finished part, with tolerances. A sketch with the size, pressure class and grade is enough to start.

☐ **Material — grade and standard**

e.g. ASTM A182 F51, A350 LF2, Alloy 625 to ASTM B564. If the grade is uncommon, send the spec and we will confirm feasibility.

☐ **Quantity**

Pieces per size, and annual volume if known — it decides tooling and price.

☐ **Heat treatment & condition**

Per drawing / standard, or name your own cycle (e.g. quenched & tempered, solution annealed).

☐ **Testing & NDT scope**

UT / MT / PT requirements; certificate type (EN 10204 3.1, or 3.2 witnessed); hardness or impact testing.

☐ **Machining**

As-forged, rough machined or finished — and which dimensions are critical.

☐ **Delivery**

Target date, destination port and Incoterms.

☐ **Marking & packing**

Project-specific marking, packing or documentation requirements, if any.

Send it to: lr05@zjlr-forging.com · WhatsApp +86 188 1511 5555 · or the RFQ form at longruiforging.com/contact | If the part does not suit a die forge, we will tell you before you spend time on it.
